## Part I

# Introduction

## 1 The package PixelArtTikz

### 1.1 Introduction

The idea is to *propose*, within a TikZ environment, a macro to generate PixelArt.

Datas are *red* by a csv file, already created and placed into the folder of the tex file, or directly created by filecontents.

Some advices about the cvs file :

- the csv file must use "," as separator ;
- empty cases are coded by "-".

```
\begin{filecontents*}{filename.csv}
  A,B,C,D
  A,B,D,C
  B,A,C,D
  B,A,D,C
\end{filecontents*}
```

Code  $\LaTeX$

While compiling, the file filename.csv will be created, and the option  $\langle$ **[overwrite]** $\rangle$  will propagate the modifications !

### 1.2 Loading of the package, and option

The *needed* package is here csvsimple, in order to read the csv file.

It's available for  $\LaTeX 2_{\epsilon}$  or for  $\LaTeX 3$ . By default, PixelArtTikz loads it for  $\LaTeX 3$ , but an *option* is available to work with  $\LaTeX 2_{\epsilon}$ .

The option  $\langle$ **[csvii]** $\rangle$  forces the usage of  $\LaTeX 2_{\epsilon}$ .

```
\usepackage{PixelArtTikz}           %package latex3
%which loads
%\RequirePackage{expl3}
%\RequirePackage[13]{csvsimple}

\usepackage[csvii]{PixelArtTikz}    %package latex2
%which loads
%\RequirePackage[legacy]{csvsimple}
```

Code  $\LaTeX$

### 1.3 Used packages

It's fully compatible with usuals compilations, such as latex, pdflatex, lualatex or xelatex.

It loads the packages and libraries :

- tikz, xintexpr et xinttools;
- xstring, xparse, simplekv and listofitems.

## 1.4 Macros and environment

There's two ways to create PixelArt :

- by an independent macro ;
- by a TikZ environment in order to put code after.

Code *LaTeX*

```
%Independent macro
\PixelArtTikz[keys]<options tikz>{file.csv}

%Semi-independent macro, in a tiks environment
\PixelArtTikz*[keys]{file.csv}

%environment
\begin{EnvPixelArtTikz}[keys]<options tikz>{file.csv}
  %tikz code
\end{EnvPixelArtTikz}
```

For the colors, its depending from the loaded packages.

This documentation was compiled with xcolor, with `{table,svgnames}` options.

# Part II

## Macros and environment

### 2 Main macro

#### 2.1 Example

The macro `\PixlArtTikz` needs :

- the file `csv` ;
- the list (by a string) of codes used in the file `csv` (eg `234679` or `ABCDJK...`) ;
- the list of symbols (if needed) to print in the cases, eg `25,44,12` or `AA,AB,AC` ;
- the list of colors (for the correction), same order as the codes.

We can begin by creating the file `csv`, directly within the `tex` code, or with a external file.

```
%creation of the csv
\begin{filecontents*}[overwrite]{base.csv}
  A,B,C,D
  A,B,D,C
  B,A,D,C
  C,A,B,D
\end{filecontents*}
```

Code  $\LaTeX$

```
%instructions and pixelarts
\begin{center}
  \begin{tblr}{colspec={*{4}{Q[1.25cm,c,m]}},hlines,vlines,rows={1.15em}}
    \SetCell[c=4]{c} Instructions & & & \\
    A & B & C & D \\
    45 & 22 & 1 & 7 \\
    Black & Green & Yellow & Red \\
  \end{tblr}
\end{center}

\PixlArtTikz[Codes=ABCD,Style=\large\sffamily,Unit=0.85]{base.csv}
~~
\PixlArtTikz[Codes=ABCD,Symbols={45,22,1,7},Symb,Style=\large\sffamily,Unit=0.85]{base.csv}
~~
\PixlArtTikz[Codes=ABCD,Colors={black,green,yellow,red},Correction,Unit=0.85]{base.csv}
~~
\PixlArtTikz[Codes=ABCD,Colors={black,green,yellow,red},Correction,Border=false,Unit=0.85]{base.csv}
```

Code  $\LaTeX$

Instructions			
A	B	C	D
45	22	1	7
Black	Green	Yellow	Red

A	B	C	D
A	B	D	C
B	A	D	C
C	A	B	D

45	22	1	7
45	22	7	1
22	45	7	1
1	45	22	7

## 2.2 Options and keys

Code  $\LaTeX$

```
\PixelArtTikz[keys]<options tikz>{file.csv}
```

The first argument, *optional* and between [...] proposes the keys :

- the key **<Codes>** with the *string* of *simple* codes of the csv file ;
- the key **<Colors>** with the *list* of colors ;
- the key **<Symbols>** with the *optional list* of alt. symbols for the cases ;
- the boolean **<Correction>** to color the PixelArt ; default false
- the boolean **<Symb>** to print the symbols ; default false
- the boolean **<Border>** to print borders of the cases ; default true
- the key **<Style>** to specify the style of the text. default \scriptsize

The second argument, *optional* and between <...> are options – in TikZ – to parse to the environment which create the PixelArt.

The third argument, *mandatory*, is the filename of the csv.

Code  $\LaTeX$

```
%creation of the csv
\begin{filecontents*}[overwrite]{test1.csv}
  -, -, -, -, -, 4, 4, 4, 4, -, -, -, -, -
  -, -, -, 4, 1, 1, 1, 1, 1, 4, 4, -, -, -
  -, -, -, 4, 1, 1, 1, 1, 1, 1, 1, 1, 4, -, -
  -, -, 4, 1, 1, 1, 1, 1, 1, 1, 1, 1, 4, -, -
  -, -, 4, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 4, -, -
  -, 4, 1, 9, 9, 1, 1, 1, 1, 1, 1, 9, 9, 1, 4, -
  -, 4, 9, 9, 9, 9, 4, 4, 4, 4, 9, 9, 9, 9, 4, -
  -, 4, 9, 4, 9, 9, 4, 4, 4, 4, 9, 4, 9, 9, 4, -
  -, 4, 1, 9, 9, 9, 4, 4, 4, 4, 9, 9, 9, 1, 4, -
  -, -, 4, 1, 1, 9, 4, 4, 4, 4, 9, 1, 1, 4, -, -
  -, -, 4, 1, 1, 1, 4, 4, 4, 4, 1, 1, 1, 4, -, -
  -, -, -, 4, 1, 1, 1, 4, 4, 1, 1, 1, 4, -, -
  -, -, 4, 3, 1, 1, 1, 1, 1, 1, 1, 1, 1, 3, 4, -, -
  -, 4, 6, 3, 1, 1, 1, 1, 1, 1, 1, 1, 3, 6, 4, -
  -, 4, 6, 6, 1, 1, 1, 1, 1, 1, 1, 1, 6, 6, 4, -
  -, 4, 6, 6, 1, 1, 1, 1, 1, 1, 1, 1, 6, 6, 4, -
  -, 4, 6, 4, 1, 1, 1, 4, 4, 1, 1, 1, 4, 6, 4, -
  2, 2, 4, 2, 4, 4, 4, 2, 2, 4, 4, 4, 2, 4, 2, 2

4 1 9 9 9 4 4 4 9 9 9 1 4
4 1 1 9 4 4 4 9 1 1 4
4 1 1 1 4 4 4 1 1 1 4
  4 1 1 1 4 4 1 1 1 4
    4 3 1 1 1 1 1 1 1 3 4
  4 6 3 1 1 1 1 1 1 3 6 4
4 6 6 1 1 1 1 1 1 6 6 4
4 6 6 1 1 1 1 1 1 6 6 4
4 6 4 1 1 1 4 4 1 1 4 6 4
2 2 4 2 4 4 4 2 2 4 4 4 2 2
2 2 2 2 2 2 2 2 2 2 2 2 2 2
2 2 2 2 2 2 2 2 2 2 2 2 2 2
      4 1 1 1 1 4
        4 1 1 4
          4 4

```

## 2.3 Starred macro

The starred *étoilee* macro `\PixelArtTikz*` is to be integrated within an environment already created. It can be useful to add code after the `PixelArt`.

In this case :

- the *optional* between `<...>` is useless ;
- the key `<Unit>` is useless too (units can be configured in the environment !)

Code  $\LaTeX$

```
\begin{center}
  \begin{tikzpicture}[scale=0.5]
    %grid to show positioning
    \draw[very thin,gray,xstep=1,ystep=1] (0,0) grid (17,-24) ;
    \foreach \x in {0,1,...,17} \draw[very thin,gray] (\x,-3pt)--(\x,3pt)%
    node[above,font=\scriptsize\sffamily] {\x} ;
    \foreach \y in {0,-1,...,-24} \draw[very thin,gray] (3pt,\y)--(-3pt,\y)%
    node[left,font=\scriptsize\sffamily] {\y} ;
    %le PixelArt
    \PixelArtTikz*[Codes=123469,Colors={Red,Brown,Yellow,Black,Blue,White},Correction]{test1.csv}
    %added code
    \filldraw[Blue] (14,-1) circle[radius=1] ;
    \filldraw[Yellow] (14,-1) circle[radius=0.8] ;
    \draw[ForestGreen,very thick,<-,>=latex] (15,-1) to[bend left=30] (18,-2)%
    node[right,font=\scriptsize\sffamily] {Code Ti\textit{k}Z} ;
  \end{tikzpicture}
\end{center}
```

## 3 PixelArt environment

### 3.1 Usage

The package PixelArtTikz proposes an environment to create a PixelArt, and to add code after.

- The environment is created within TikZ and added code is to give in TikZ !
- The added code will be print "above" the PixelArt !

```
\begin{EnvPixlArtTikz}[keys]<options tikz>{filename.csv}
  %tikz code(s)
\end{EnvPixlArtTikz}
```

Code  $\LaTeX$

The first argument, *optional* and between [...] proposes the keys :

- the key **<Codes>** with the *string* of *simple* codes of the csv file ;
- the key **<Colors>** with the *list* of colors ;
- the key **<Symbols>** with the *optional list* of alt. symbols for the cases ;
- the boolean **<Correction>** to color the PixelArt ; default false
- the boolean **<Symb>** to print the symbols ; default false
- the boolean **<Border>** to print borders of the cases ; default true
- the key **<Style>** to specify the style of the text. default \scriptsize

The second argument, *optional* and between <...> are options – in TikZ – to parse to the environment which create the PixelArt.

The third argument, *mandatory*, is the filename of the csv.

### 3.2 Exemple

The symbols are at the nodes ( $c; -l$ ) where  $l$  and  $c$  are the row and column of the data in the csv file.

```
\begin{center}
  \begin{EnvPixlArtTikz}%
    [Codes=123469,Colors={Red,Brown,Yellow,Black,Blue,White},Correction,Unit=0.25]
    {test1.csv}
    \filldraw[Blue] (14,-1) circle[radius=1] ;
    \filldraw[Yellow] (14,-1) circle[radius=0.8] ;
    \draw[ForestGreen,very thick,<-,>=latex] (15,-1) to[bend left=30] (18,-2)%
      node[right,font=\scriptsize\sffamily] {Ti\textit{k}Z code} ;
  \end{EnvPixlArtTikz}
\end{center}
```

Code  $\LaTeX$
