The pagesel package
Heiko Oberdiek
2020-08-03 v1.10

Abstract
Single pages or page areas can be selected for output.

1 Usage

The package pagesel is a \LaTeX{} package:

\usepackage[⟨options⟩]{pagesel}

(For plain\TeX{} and \LaTeX{} 2.09 the similar package selectp\textsuperscript{1} from Donald Arsenau\textsuperscript{2} can be used.)

Depending on the options the package works in two modes:

1. If no page selecting option is present, so the package ignores the other options and finishes itself. So no page will be suppressed by the package and auxiliary files will be written.

2. With at least one page selecting option the specified pages are selected and the other are suppressed. The default for this mode is that auxiliary will not be overwritten. (This can be changed by an option.)

1.1 Page selecting

The package pagesel sets up a new counter that is incremented by each \texttt{\shipout}. In this way the package counts the output pages regardless the value of the page counter. So each page can individually by addressed, even if there are several pages with the same page number.

1.1.1 Options for selecting pages

\texttt{odd}: The output pages must have an odd number. All even output pages are suppressed. If there are no page areas specified so all odd pages are print. With page areas only the odd pages in this areas are selected.

\texttt{even}: The opposite of option \texttt{odd}.

\texttt{Page area}: A page area consists of three elements: the starting output page number, an “area” hyphen, and the output page number of the last page in this area. Each component is optional, so there are four kinds to spezify a page area:

⟨\texttt{m}⟩⟨\texttt{n}⟩: All pages between ⟨\texttt{m}⟩ and ⟨\texttt{n}⟩ inclusive.

⟨\texttt{n}⟩: All pages until ⟨\texttt{n}⟩ inclusive.

⟨\texttt{m}⟩+: The page area starts with ⟨\texttt{m}⟩ and all pages to the end of document are selected.

⟨\texttt{s}⟩: All pages (not very useful).

⟨\texttt{s}⟩: The single page ⟨\texttt{s}⟩.

1.1.2 Examples

<table>
<thead>
<tr>
<th>Options</th>
<th>Output pages</th>
</tr>
</thead>
<tbody>
<tr>
<td>[1, 4, 9]</td>
<td>1, 4, and 9</td>
</tr>
<tr>
<td>[7–10, 3]</td>
<td>3, 7, 8, 9, and 10</td>
</tr>
<tr>
<td>[odd, 3–6]</td>
<td>3, and 5</td>
</tr>
<tr>
<td>[–4, 3, even, 7–8]</td>
<td>2, 4, and 8</td>
</tr>
</tbody>
</table>

\textsuperscript{1}Url: \url{https://ctan.org/pkg/selectp}

\textsuperscript{2}Donald Arsenau’s email address: asnd@triumf.ca
1.2 Auxiliary files

If a page is suppressed, the \texttt{write} commands are not performed. Labels, index entries, or entries for the table of contents aren’t written. So it is likely that the table of contents, registers, and lists are incomplete.

### 1.2.1 Options for handling auxiliary files

**nofiles**: This is the default. Auxiliary files are read but not written or changed. Also the job is aborted after the last selected page for saving time.

**nonofiles/files**: Auxiliary files are written.

### 1.2.2 Package hyperref

In old versions of \texttt{hyperref} [1999/04/12 v6.55] (and below) there is a bug with \texttt{nofiles}:

- Some “garbage” appears on terminal and in the log file. This is harmless and can be ignored.

- The outline auxiliary file \texttt{jobname.out}, however, is opened and truncated to zero bytes. Version 1.0 of this package had loaded a patch file \texttt{hypnofil.tex}, if it detects \texttt{hyperref} to get \texttt{nofiles} work.

With the new version of \texttt{hyperref} [1999/04/13 v6.56] \texttt{nofiles} works now. Therefore the workaround code is no longer needed and removed.

## 2 Implementation

1 (*package)

### 2.1 New implementation using the LaTeX kernel hooks

2 \texttt{\NeedsTeXFormat{LaTeX2e}}
3 \texttt{\ProvidesPackage{pagesel}}
4 \texttt{[2020-08-03 v1.10 Select pages of a document for output (HO)]%}
5 \texttt{\providecommand\IfFormatAtLeastTF{\@ifl@t@r\fmtversion}}
6 \texttt{\IfFormatAtLeastTF{2020/10/01}{\input{pagesel-2016-05-16.sty}}}
7 \texttt{\IfFormatAtLeastTF{2020/10/01}{\endinput}}
8

If the package is loaded twice, the package code does not work. So stop loading the package, if it is already loaded.

9 \texttt{\@ifundefined{ps@oddpages}{}}{%
10 \PackageWarningNoLine{pagesel}{Package already loaded.}%
11 \endinput
12 }%}
13 (/package)

### 2.2 Package

14 (*packagefrozen)
15 \texttt{\NeedsTeXFormat{LaTeX2e}}
16 \texttt{\ProvidesPackage{pagesel}}
17 \texttt{[2020-08-03 v1.10 Select pages of a document for output (legacy code) (HO)]%}

If the package is loaded twice, the package code does not work. So stop loading the package, if it is already loaded.

18 \texttt{\@ifundefined{ps@makevoid}{}}{%
\PackageWarningNoLine{pagesel}{Package already loaded.}\%  
\endinput

\ps@makevoid Macro $\ps@makevoid$ clears the output box. Because nothing is shipped out and this is intended, we reduce the counter $\deadcycles$ in order to avoid problems, if more than $\maxdeadcycles$ pages are omitted.

\newcommand*{\ps@makevoid}{%  
\global\setbox\@cclv\copy\voidb@x  
\begingroup  
\count@=\deadcycles  
\advance\count@ by -1\relax  
\deadcycles=\count@  
\endgroup  
}  

⟨/packagefrozen⟩

\ps@oddpages

\newcommand*{\ps@oddpages}{0}  
\DeclareOption{odd}{\renewcommand*{\ps@oddpages}{1}}  
\DeclareOption{even}{\renewcommand*{\ps@oddpages}{2}}  
\DeclareOption{nofiles}{\let\ps@nofiles\nofiles}  
\DeclareOption{nonofiles}{\let\ps@nofiles\@empty}  
\DeclareOption{files}{\let\ps@nofiles\@empty}  
\ExecuteOptions{nofiles}  
\DeclareOption*{%  
\begingroup  
\expandafter\ps@checkoption\CurrentOption-\END  
\edef\x{\endgroup\noexpand\ps@store{\ps@first}{\ps@last}}%  
\x  
\}  

\ps@checkoption

\newcommand*{\ps@checkoption}{%  
\def\ps@checkoption#1-#2\END{%  
  \ifeofx\#1\%  \else  
    \edef\ps@first{\#1}  
  \fi  
  \ps@checklast\#2%  
}  
\ps@checklast

\newcommand*{\ps@checklast}{%  
\def\ps@checklast#1\END{%  
  \ifeofx\#1\%  \else  
    \edef\ps@last{\#1}  
  \fi  
  \ps@checklast#2%  
}  

\ps@checklast
\ps@ifinset
\newcommand*{\ps@ifinset}[4]{% 
  \ifnum#1>\value{ps@count}\
  \ps@ReturnAfterElseFi{#4}%
  \else\ps@ReturnAfterFi{% 
    \ifnum#2<\value{ps@count}\
    \ps@ReturnAfterElseFi{#4}%
    \else\ps@ReturnAfterFi{#3}%;
    \fi\fi}
}\ps@pagetest
\newcommand*{\ps@pagetest}[2]{% 
  \ps@ifinset{#1}{#2}{\let\ps@next\@empty}{}%}
\ps@pagetest
\ps@pagetest

⟨/package | packagefrozen⟩
\packagefrozen\EveryShipout{% 
\package\AddToHook{shipout/before}{% 
("package | packagefrozen")\stepcounter{ps@count}%; 
\ifnum\value{ps@count}>\ps@lastpage\relax 
\global\output{\ps@cleanup@if 
\ps@group@message 
\typeout{Package pagesel Notice: Aborting LaTeX job after last selected page (\ps@lastpage).}%; 
\ps@message@ignore 
\global\setbox\@cclv\box\voidb@x 
\deadcycles0\relax
First leave the output group before ending the job. 
\aftergroup\@@end
\ps@next\@empty 
\if\ps@testlist\@empty 
\let\ps@next\ps@makevoid 
\ps@testlist 
\fi \ps@oddpages=1 % 
\ifodd\value{ps@count}%; 
\else \let\ps@next\ps@makevoid 
\ps@testlist 
\fi \ps@oddpages=2 %
2.3 AtBeginDvi hook support

The material of box \@begindvibox is recorded in parallel in box \ps@begindvibox.
\global\setbox\ps@begindvibox\vbox{%
  \unvbox\ps@begindvibox
}\fi
\let\ps@org@AtBeginDvi\AtBeginDvi
\def\AtBeginDvi#1{%
  \global\setbox\ps@begindvibox\vbox{%
    \unvbox\ps@begindvibox
  #1%
  \}%
}\ps@org@AtBeginDvi{#1}%
}

\ps@begindvi
Macro \ps@begindvi is called the similar way as \@begindvi. If the first page is printed, then \AtBeginDvi should work as usual. Otherwise the contents of box \ps@begindvibox is set on the first selected page.
\def\ps@begindvi{%
  \ifx\ps@next\@empty
    \global\let\ps@begindvi\@empty
  \else
    \global\let\ps@begindvi\ps@begindvi@do
  \fi
}\ps@begindvi@do{%
  \ifx\ps@next\@empty
    \setbox\@cclv\vbox{%
      \unvbox\ps@begindvibox
      \box\@cclv
    }%
    \global\let\ps@begindvi\@empty
  \fi
}\ps@begindvi

3 Installation

3.1 Download
Package. This package is available on CTAN:\(^3\):

3.2 Package installation
Unpacking. The .dtx file is a self-extracting docstrip archive. The files are extracted by running the .dtx through plain \TeX:

\texttt{tex pagesel.dtx}

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as \texttt{texmf} tree):

\(^3\text{CTAN:pkg/pagesel} \)
3.3 Refresh file name databases

If your TeX distribution (TeX Live, MiKTeX, . . .) relies on file name databases, you must refresh these. For example, TeX Live users run texhash or mktexlsr.

3.4 Some details for the interested

Unpacking with \LaTeX. The .dtx chooses its action depending on the format:

plain \TeX: Run docstrip and extract the files.
\LaTeX: Generate the documentation.

If you insist on using \LaTeX for docstrip (really, docstrip does not need \LaTeX), then inform the autodetect routine about your intention:

latex \let\install=y\input{pagesel.dtx}

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the .dtx or the .drv to generate the documentation. The process can be configured by the configuration file ltxdoc.cfg. For instance, put this line into this file, if you want to have A4 as paper format:

\PassOptionsToClass{a4paper}{article}

An example follows how to generate the documentation with pdflatex:

pdflatex pagesel.dtx
makeindex -s gind.ist pagesel.idx
pdflatex pagesel.dtx
makeindex -s gind.ist pagesel.idx
pdflatex pagesel.dtx

4 History

[1999/03/01 v0.9]

- The first version was built as a response to a question of Dirk Kuypers\(^4\), published in the newsgroup de.comp.text.tex:
  “Re: pdflatex nur fuer bestimmte Seiten???”\(^5\)

\(^4\)Dirk Kuypers’s email address: dk@connets.rwth-aachen.de
\(^5\)Url: https://groups.google.com/group/de.comp.text.tex/msg/6b68c7b3439fb658
[1999/04/05 v1.0]
- Documentation added in dtx format.
- Copyright: LPPL (CTAN:macros/latex/base/lppl.txt)
- Options odd, even added.
- `\nofiles` added, bug fix for `hyperref`.
- Abort loading of package, if nothing to do.

[1999/04/13 v1.1]
- `\nofiles` bug fix removed because of `hyperref` 6.55.
- First CTAN release.

[2003/06/05 v1.2]
- `\deadcyles` is decremented for omitted pages.
- LPPL 1.2.

[2006/02/20 v1.3]
- Code is not changed.
- New DTX framework.
- LPPL 1.3

[2006/03/02 v1.4]
- Support for `\AtBeginDvi` added.

[2006/03/07 v1.5]
- Job is aborted after last selected page.

[2007/04/11 v1.6]
- Line ends sanitized.

[2007/04/12 v1.7]
- Hard coded box number 255 replaced by macro `\@cclv`.

[2008/08/11 v1.8]
- Code is not changed.

[2016/05/16 v1.9]
- Documentation updates.
5 Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
